General information about upcoming enhancements for Outlook for Windows

Solution Title

General information about upcoming enhancements for Outlook for Windows

Details

Microsoft will be rolling out updates and enhancements to Outlook for Windows starting Fall of 2018.

**New features and changes**

- New look and feel - small changes to the message list help highlight things that matter, message subjects are more prominent in the reading pane, header takes up less space, etc.
- Simplified Ribbon - customizable and adaptable
- Easy access to group folders

More information can be found in Microsoft's blog post. These updates will roll out slowly over the next several months to those using the click-to-run version of Office (downloaded from Office.com). They will not be available with Outlook in Office 2019 for Windows.
