How to: Flush your DNS cache on your Mac

Details

1) Go to “Spotlight” and search for Terminal.

2) In Terminal type `sudo dscacheutil -flushcache; sudo killall -HUP mDNSResponder; say DNS cache flushed` and press the Return key.

3) If prompted for a password, type your admin password and press the Return key.

TIP: You will not see any input when typing your password.
OUTCOME

Your DNS cache will be flushed.
