How to: Connect to MyWeb using Adobe Dreamweaver Creative Cloud on Mac

Details

You may add, edit or delete files on your MyWeb website in Dreamweaver by connecting through the MyWeb server using the directions below.

Please make sure you have activated your MyWeb service before proceeding.

(Network: If you are in the TTU residence halls or off the TTU campus, you will first need to establish a TTUnet VPN connection.

1) Click anywhere on the desktop to activate Finder. Click on the Go menu at the top of the screen and choose Connect to Server.

2) The "Connect to Server" prompt will appear. Type the path smb://myweb.ttu.edu/Users/your_eRaider_username and click Connect.

(Tip: Click the plus symbol (+) to add the path to your Favorite Servers so you will not have to type the address in the future.)
3) If you are prompted for credentials, choose **Registered User**, type your information as shown below, and then click **Connect**.

   - **Name**: ttu\your_eRaider_username
   - **Password**: your eRaider password

4) Close the Finder window that opens and open Adobe Dreamweaver CC.

5) Click the **Site** menu and choose **Manage Sites**.

6) Before adding a new entry for MyWeb, review the list of sites to see if you have existing entries listed for your personal TTU website (MyWeb). If so, consider selecting them from the list and clicking the minus symbol (−) to avoid confusing them with the new entry you are about to add. (This will not delete or modify any of the actual files stored on the server.)
7) Click the **New Site** button.

8) In the new window that open, click the **Site** sub-section if it is not already selected. Type a name for your site in the "Site Name" field. This can be any descriptive name you wish, such as "MyWeb." In the "Local Site Folder" box, type `/Volumes/your_eRaider_username/myweb`. 
9) Click the **Servers** sub-section, and then click the plus symbol (+).
10) Complete the following information under the "Basic" tab and click **Save**.

- **Server Name**: any descriptive name you wish, such as "MyWeb"
- **Connect using**: Local/Network
- **Server Folder**: /Volumes/your_eRaider_username/myweb
- **Web URL**: https://www.myweb.ttu.edu/your_eRaider_username
11) Click **Save**.
12) Click Done.

OUTCOME

You will be able to edit your MyWeb website with Dreamweaver. Any changes you save will be immediately visible to anyone on the Internet at https://www.myweb.ttu.edu/your_eRaider_username or https://myweb.ttu.edu/your_eRaider_username.

⚠️ CAUTION: Files you delete from MyWeb are unrecoverable.
The name of the home page required is one of the following:

- index.php
- index.asp
- index.aspx
- index.htm
- index.html
- default.php
- default.asp
- default.aspx
- default.htm
- default.html
- home.php
- home.asp
- home.aspx
- home.htm
- home.html

The web server will look for the file names in the order listed above. The file name is case sensitive. If you rename your home page file to one of these file names, then the page should show up when you go to your website's URL at either https://myweb.ttu.edu/your_eRaider_username or https://www.myweb.ttu.edu/your_eRaider_username. Be sure you have your home page in the root directory of your account and not in a sub-folder.

If you restart your computer or lose connection to your MyWeb server, you may need to follow Steps 1-3 again to re-authenticate with the server before you will be able to connect to MyWeb in Dreamweaver.
