How to: Set up TechMail on Android 6.0

Details

NOTE: Android is highly customized and may look different depending on your manufacturer. You may see differences when following these steps.

1) Set up a non-simple passcode or password and enable encryption. If you have already done this, skip to Step 2.

   TIP: For most devices, setting a passcode or password enables encryption automatically. If you have a passcode or password on your device, encryption may already be enabled.

2) Tap Settings.

3) Under the "Personal" tab, tap Accounts.
4) Tap **Add account**.

5) Tap **Exchange**.
6) Type your TechMail address in the field, then tap Next.
7) Type your eRaider password in the field, then tap **Next**.

![Password entry screen]

8) Tap **OK** on any prompts you see to continue. For more information about this prompt, please see remote security administration.

**NOTE:** Depending on your device, you may or may not see the prompts.
9) Configure the following information, then tap **Next**.

- **DomainUsername**: your TechMail address (e.g. `john.doe@ttu.edu`)
- **Password**: your eRaider password
- **Server**: `outlook.office365.com`
10) Tap OK on any prompts you see to continue. For more information about this prompt, please see remote security administration.

NOTE: Depending on your device and if you are an Office 365 user, you may or may not see the prompts.
11) Choose the preferences you wish to sync with the TechMail servers. Then, tap Next.
12) Tap **Activate**.

The server mail.ttu.edu requires that you allow it to remotely control some security features of your Android device.

Activating administrator will allow Gmail to perform the following operations:

- **Erase all data**
  Erase the phone's data without warning by performing a factory data reset.

- **Set password rules**
  Control the length and the characters allowed in screen-unlock passwords.

- **Monitor screen-unlock attempts**
  Monitor the number of incorrect passwords typed, when unlocking the screen, and lock the phone or erase all the phone's data if too many incorrect passwords are typed.

- **Lock the screen**
  Control how and when the screen locks.

- **Set lock-screen password expiration**

13) Type a descriptive name for your account, such as *TechMail*. Then, tap **Next**.
OUTCOME

You will be able to access and use TechMail on your Android device.
